

COMPLETE CRANE REBUILDS

IPS specializes in complete ground up rebuilds at our Duluth, Minnesota facility. Our facility has track running into the building and is serviced by all major railroads. Cranes can be shipped by rail on their own wheels, by rail car or by truck. We are available to assist in the shipping process.

As part of the rebuild, the crane is taken down to its most basic components and rebuilt. Wear items are replaced, and all other components are re-certified and replaced with new as needed. Structural welds are inspected, repaired and certified by a third party. Worn surfaces remachined.

The customer can choose from a wide array of upgrades to improve the safety, performance, and ease of maintenance of the crane. Throughout the course of the rebuild, IPS will provide regular updates with photos showing the status of the project. The typical cost of rebuilding a crane is about half the cost of purchasing new.

We stand by our work with a 1 year warranty.

IPS will provide a free, no obligation quote for rebuilding your crane.
